

Swansway

North West England and The Midlands

Established Dealership and Servicing Specialist

CCTV (with Remote Monitoring) via Nufire Crewe Vehicle Compound

THE CHALLENGE

Due to business expansion, a fenced parking area needed to be swiftly protected allowing high value vehicle stock to be securely stored and monitored by Nufire.

As no lighting was on site and little infrastructure, Nufire had to work in conjunction with builders and electrical contractors to quickly devise a scheme and then implement it.

NUFIRE Automotive

CLIENT PROFILE

Swansway has many car dealerships across the North West, Midlands and North Wales with a turnover of £800 Million. They stock a variety of car brands including, Jaguar, Audi, Volkswagen, Citroen, Fiat, Honda etc. Our client is a family business and we have enjoyed a long trading history with them. Nufire has installed many security devices over the years including, fire intruder alarms, CCTV, barriers and gates, full access control, emergency lights, fire extinguishers and so on.

LOCATION

Crewe central, adjacent to the railway.

KEY TECHNOLOGY

High definition Honeywell IP cameras, including a high speed PTZ Dome. Honeywell's Xtralis Adpro NVR ensures video data is sent instantly on activation of sensors.

KEY BENEFITS

Remote security via CCTV allows cost effective supervision of high value stock, without compromising on site security.

"We are very happy that this site has been secured so quickly for us, following our swift expansion"

SARAH ECCLES
Fleet Director

THE SOLUTION

After consultation with the electrical contractors, it was decided that Nufire would provide the lighting and CCTV columns so they could be used for both purposes.

A total of 22 Honeywell fixed 4MP cameras and detectors are now located on 9 columns across the site. One PTZ Dome Camera 2MP has been installed to the central column so the whole site can be monitored. The transmission and recording unit (Honeywell Xtralis Adpro 32 channel NVR) has been installed in a secure bunker. A broadband signal with 4G back secured the site within a month, allowing stock to be moved in.

BENEFIT

Audi Crewe was able to move their vehicle stock to a central location that was physically secure and monitored via CCTV, 24 hours a day. Operatives moving stock use a coded keypad to set or unset the system.

Director, David Smyth, is relieved to get the system up and working and impressed that his main showroom could view images remotely via an app. This also permits remote stock verification.

FOR MORE INFORMATION

We are experts at protecting your valuable business assets from Fire and Theft.

We provide industry leading fire safety and security solutions from technologically advanced fire detection equipment, through to skilled installation and around the clock, remote monitoring.
