

**TFS** TRANS-BRIDGE  
FREIGHT SERVICES LTD

## Transbridge Freight

### Middleton, Greater Manchester Warehousing and Distribution Company

#### THE CHALLENGE

**Trans-Bridge Freight approached Nufire with regard to re-designing their existing intruder alarm set-up. They particularly wanted to improve reliability, functionality, but also invest in technology that could be expanded over time.**

The new security system was to provide protection to their substantial warehousing facilities. This area is steel clad, incorporating integral offices. All fire and shutter doors had to be contacted to protect the client's extensive palletised stock.

A specific requirement was that the new system could be interrogated remotely via a phone app. A police connection was also a prerequisite.

# NUFIRE Commercial Intruder Alarm

#### CLIENT PROFILE

Trans-Bridge was established in 1991 and operates from a 1.38 acre site with extensive warehousing facilities (8,300sq ft).

Our client runs a state of the art warehousing and delivery operation and keeps a variety of HGV vehicles and vans on site.

#### LOCATION

Middleton, Greater Manchester

#### KEY TECHNOLOGY

The HKC Hybrid Alarm allows a flexible installation. Radio fobs ensure easy use and setting of the system. It utilises a WiFi/GSM module for internet connectivity, allowing full remote access to system logs and remote operation.

#### KEY BENEFITS

The client can now interrogate alarm activations from home should the system trigger. This allows remote reset and/or removal of problem zones, as required.

"A brilliant design and fantastic phone app - we highly recommend Nufire"

RYAN HAJDUKEWYCZ  
Site Manager

## THE SOLUTION

**The design of the HKC system within the building has provided comprehensive detection/protection, including contacts and long-range dual technology sensors within the warehouse. These were chosen because they are very stable in cold environments.**

The HKC WIFI/GSM module also allows radio devices to be installed and has a facility to contact mobile phones/tablets etc. Setting and unsetting is via a key fob. This was upgraded to a radio fob with a set/unset indicator on the device itself. This allows an interface with the CCTV system.

The alarm system remotely controls CCTV cameras allowing drivers to enter the secure yard with ease. Essentially the CCTV system is disarmed with an alarm radio fob.

The WIFI/GSM module allows Trans-Bridge to check on the status of the alarm system by looking at logs, users of the alarm and any activations before attending the site.

The system is also programmed to send a signal to the police via a monitoring station through a dual path GPRS connection (General Packet Radio Service).

## BENEFIT

This family run business is delighted with the new set up as it gives them complete remote control of their site. They also now enjoy enhanced security with the latest remote-monitored CCTV system by Nufire.

### FOR MORE INFORMATION

We are experts at protecting your valuable business assets from Fire and Theft.

We provide industry leading fire safety and security solutions from technologically advanced fire detection equipment, through to skilled installation and around the clock, remote monitoring.
